

Dear Sir or Madam,

I am writing to apply for the Senior Data Engineer position at SoundCloud.

I have a strong background in backend development, data systems, and large-scale infrastructure. As a co-founder and CTO of WetDreams, I built and scaled a high-traffic platform used by over 150,000 users. I designed reliable systems, worked with cloud infrastructure, and built real-time features. This experience helps me create stable, scalable, and efficient services.

At QC Design and in my previous roles, I worked with C++, Python, SQL, and distributed systems. I focused on performance, data accuracy, and reliability. I regularly built pipelines, optimized systems, and improved monitoring and testing. This matches well with SoundCloud's focus on data quality, performance, and observability.

I am comfortable working with modern tools such as Kubernetes, CI/CD pipelines, cloud platforms, and databases. I enjoy working with different teams and turning complex problems into simple, working solutions. My background in mathematics and computer science helps me design clear and reliable data models.

I am excited about SoundCloud's mission to support artists and listeners. I would be glad to contribute my technical skills to help build strong data platforms that power music discovery and creativity.

Thank you for your time and consideration.

Yours truly,

Ivan Ogloblin
