

Ivan Ogloblin

📍 Blaustein – Germany ▪ 📞 +49 15162630532 ▪ ✉ ivanogloblin2022@gmail.com ▪ 🌐 github.com/ivanoglo

Full-stack Engineer with a strong focus on cloud-native systems, scalable backend platforms, and developer infrastructure. Experienced in building and operating high-traffic products (200k+ users), designing CI/CD and deployment workflows, and owning production systems end-to-end. Background in distributed systems, performance optimization, and applied research.

Work Experience

Quantum Software Engineer

Feb 2024 - Feb 2026

QC Design

- Built core simulation platform using high-performance C++/Python infrastructure with custom bindings, achieving **10,000x speedup** over legacy implementations.
- Prototyped and productionized advanced simulators, error-correction codes, and optimization techniques for circuit analysis and logical error rate estimation.
- Designed and maintained comprehensive **testing, benchmarking, and CI/CD pipelines** to ensure numerical accuracy and long-term maintainability.
- Used GCP to run long simulations at scale, manage distributed workloads, and generate large datasets for research analysis.

Founding Engineer

Oct 2022 - Dec 2023

WD AI

- Launched and scaled a profitable AI SaaS platform serving **200,000+ users** with production-grade distributed backend.
- Designed and implemented the full stack using TypeScript, React, NestJS, and PostgreSQL, including authentication, billing, and integration with internal microservices and third-party APIs.
- Built containerized microservices infrastructure with Kubernetes and Docker, operating **12+ dynamically scalable instances** for hosting large generative models, supporting **~900 concurrent sessions**.
- Established automated CI/CD pipelines, staging environments, and safe deployment workflows.
- Integrated Redis for caching and session management, reducing database load and improving latency.

Full-stack Developer

Sep 2021 - Aug 2022

Huawei

- Worked on a real-time collaborative 3D platform enabling simultaneous multi-user interaction with shared virtual objects.
- Engineered backend systems with SQL databases to manage shared sessions and maintain object consistency under high concurrency.
- Optimized frontend performance in React for complex interactive scenes.

Developer Intern

Mar 2021 - Sep 2021

Yandex

- Maintained and optimized high-volume data ingestion pipelines using C++ and Python for large-scale LLM training datasets.
- Designed SQL-based feature extraction workflows and automated testing to improve data quality and pipeline reliability.

Projects

SF Composer

2023

Developed a Django-based web platform for the simulation of linear and nonlinear optics in quantum computational models, with a PostgreSQL backend and interactive experiment workflows. Used Strawberry Fields as the underlying engine. ([github](#))

Vacanter

2019

Developed backend and database systems for a mobile job-matching application using PostgreSQL and Python, focusing on transactional integrity and real-time updates. ([github](#))

Education

Bachelor of Science in Computer Science and Software Engineering

Sep 2019 - Jul 2023

Saint-Petersburg State University

Master of Science in Mathematics

Sep 2022 - Nov 2025

Pontifical Catholic University of Rio de Janeiro

Technical Skills

- **Backend & Databases:** PostgreSQL, SQL, Redis, Python, C++, C#, Node.js, NestJS, Django, REST APIs
- **Infrastructure & DevOps:** Docker, Kubernetes, CI/CD, Linux, Git, monitoring (Prometheus, Grafana), VPS Hosting
- **Frontend & Web:** TypeScript, React, Next.js, CSS
- **Languages:** Russian (Native), English (Fluent), Portuguese (Conversational), German (Beginner)
